Title: COVID-19: Using Social Media to Promote Mental Health in Medical School During the Pandemic

Author names: Han G. Ngo¹, Brianna L. Gibney¹, Paul Patel¹, Jennifer L. Nguyen¹

Degrees: B.S.

Affiliations: Oakland University William Beaumont (OUWB) School of Medicine

About the author: Han G. Ngo, Brianna L. Gibney, Paul Patel, and Jennifer L. Nguyen are second-year medical students at Oakland University William Beaumont School of Medicine, Rochester Hills, Michigan, USA of a 4-year M.D. program. We are part of the Asian Pacific American Medical Student Association (APAMSA).

Acknowledgment: We would like to thank students and faculty of OUWB School of Medicine for their participation in our virtual mental health campaign. We also thank Ellis Kim for editing our article.

Financing: OUWB APAMSA mental health campaign was hosted virtually at no cost.

Conflict of interest statement by authors: The authors had no funding, financial relationships, or conflicts of interest to disclose.

Compliance with ethical standards: Any aspect of the work covered in this manuscript has been conducted with the ethical approval of all relevant bodies and such approvals are acknowledged within the manuscript.

Authors Contribution Statement: Conceptualization, Methodology, Resources, Writing – Original Draft, Writing – Review & Editing, Supervision, Project Administration: HN, BG, PP, JN.

Manuscript word count: 947

Number of Figures and Tables: 3

Discussion Points:
1. APAMSA at OUWB leads COVID-19 mental health awareness campaign
2. Breaking the stigma associated with mental health for the medical school community during COVID-19
3. Using social media to promote mental health in medical school during the pandemic
4. Creating a long-lasting tradition of mental health promotion for the medical school community
Publisher’s Disclosure: This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our readers and authors we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final citable form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.
THE EXPERIENCE.

The Asian Pacific American Medical Student Association (APAMSA) is a national student organization that advocates for the health of the Asian American Pacific Islanders. One of APAMSA’s long-standing traditions has been the mental health initiative, in which local chapters are encouraged to take action to promote mental health and wellness for their members and communities.¹

In May this year, our APAMSA chapter at Oakland University William Beaumont (OUWB) School of Medicine hosted a mental health campaign titled “Socially Distant but Emotionally Connected: 6ft Closer During Quarantine” (Figure 1). Given the coronavirus pandemic and social isolation, we selected our existing APAMSA Facebook page as the platform to host our campaign. The campaign lasted two weeks and featured both written responses and video responses from medical students and faculty who wanted to share how they were coping with the pandemic. The goal was to create a space for everyone at OUWB to engage in meaningful conversations about mental health and support each other during this trying time.

From the mental health campaign, we soon discovered medical students and faculty members had a myriad of thoughts and tips to share with their fellow peers. One student said, “nothing can quite replace the connection that is felt by the proximity of another person” when remarking on the — at the time — novel quarantine rules. We had gotten accustomed to being around each other at school that we were flustered when isolation initially began. It was especially daunting for some students who were far away from their friends and family. However, the student also suggested that this was a perfect opportunity to reconnect with people one may have not heard from for a long time, saying, “I have enjoyed reviving old conversations and initiating new ones” and “it makes for great storytelling when months and years worth of accrued experiences are showcased in a spontaneous call.” One of the faculty members provided a visceral account of his experience during the pandemic saying, “I would describe myself as often agitated, worried, depressed … numerous adjectives melded into a single troubled state.” He shared familial and work circumstances that had made the pandemic quite vexing for him. For us students, this was a tangible and genuine way to understand just how widespread the effects of the pandemic were as an esteemed faculty member struggled in the same ways we did. Nevertheless, he had warm words to support the students by saying, “While I have always said ‘my door is always open to you,’ that means little nowadays. Perhaps it’s better to say ‘I’m only an email or a phone call away.’ I have always been, and will always be, here for you.”

Numerous other medical students and faculty members shared their feelings about xenophobia, loneliness, and lack of motivation during the pandemic, but also added helpful tips on how to adapt to a new normal. Though the pandemic came with its share of difficulties and problems, we were reminded again how close of a family our community is and that we will always be there for each other during these difficult times.

Over the course of our two-week campaign, each post was able to reach an average of 220 followers and had an average of 84 engagements according to Facebook analytics. Although our campaign could have reached more people through broadening our social media platforms to Instagram and Twitter, we considered it a success in the following ways. Firstly, by including the voices of faculty and students, our campaign was the first of its kind at our medical school to bring members of the community together to discuss mental health.
This was evident when several medical students voluntarily reached out and asked to share their stories on our platform. Secondly, we included a daily mental health challenge component as a way to motivate students and faculty to engage with each other in a way that otherwise would not have been possible during social isolation. For example, some of the challenges included trying a new recipe and reconnecting with a faculty member (Figure 2). Many students sent in photos from our daily challenges and we featured them on our Facebook page. Through our initiative, the emotional support within our OUWB community was able to penetrate the barriers of social distancing.

Overall, the meaningful connection created by our campaign made it more than a worthwhile endeavor. Social networking sites such as Facebook make information more accessible, help reduce stigma about certain health conditions, and provide social support for the general public. In addition to the aforementioned benefits, an online health campaign can be held at no extra financial cost to the organization. We urge that other medical schools implement their own mental health awareness campaigns to destigmatize the topic in their communities. The following steps can be used to get started:

1. Identify an interest group that advocates for mental health to start planning the campaign. Collaborate with other interest groups by asking them to promote posts on social media.
2. Narrow down the focus of the campaign by deciding on the participants and the subject matter. Will it be limited to medical students? Will it be subjects related to preclinical education or clinical rotations?
3. Make a list of questions that you would like the participants to address.
4. Collect responses and decide which social media platform(s) to post on. Lastly, share with your community (Figure 3).

Mental health is a pertinent topic that is often overlooked in the medical school community. The theme of our campaign was #stay6ftclosetoyourfeelings during the pandemic, but we hope that regardless of the times, a long-lasting tradition of mental health promotion for medical students will be created.
