Financing: None

Conflict of interest statement by authors: Nothing to disclose

Compliance with ethical standards: Not applicable

Authors Contribution Statement: Conceptualization: IY. Writing – Original Draft: IY. Writing – Review & Editing: IY, BG. Visualization: IY, BG.

Manuscript word count: 1095

Number of Figures and Tables: 0

Publisher’s Disclosure: This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our readers and authors we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final citable form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.
THE EXPERIENCE.

This is an extraordinary time, one that we never thought we would have to experience in our lifetime. On the 11th March 2020, the World Health Organisation (WHO) announced the COVID-19 outbreak caused by severe acute respiratory syndrome coronavirus-2 (SARS-CoV-2), a pandemic. A recent report by WHO states as of 29th June 2020, globally there has been 10 million cases of COVID-19 reported, of whom 500,000 have sadly passed.

The COVID-19 pandemic had a significant impact on healthcare student’s medical education across the globe. On the 13th March, all universities and medical students’ placements in the UK were disrupted and teaching was thereon provided remotely. Therefore, resulting in students missing out on clinical exposure which is key in the development of our clinical skills. Many third-year medical students like us were in the process for preparing for our examinations. We were automatically progressed to fourth year, and our clinical placements came to an end. Recognizing the huge burden on the National Health Service (NHS), with the lack of healthcare resources and high demand in staff, we sought an opportunity to work in a clinical environment.

We have been working on the frontline as call handlers at the Emergency Community Death Service (ECDS) for an Out of Hours service provider named BARDOC (Bury and Rochdale Doctors on Call) for the NHS providing care across Greater Manchester (GM) in the North West of the United Kingdom (UK). The ECDS service was set up rapidly due to large number of deaths in the community occurring daily that led to an increased workload on GP’s. We initially supported staff in setting up the service which involved training other medical students and non-clinical staff about the role. Although we were unfamiliar with how deaths are dealt in the community, we had to quickly learn the legislation around the verification of deaths, the completion of Medical Certificate of Cause of Death (MCCD) and how cremation papers are completed in order to complete our role effectively. The Coronavirus Act 2020 was introduced to increase the number of health care staff available to assist during the pandemic. It allowed both retired healthcare professionals to return to work and fifth year medical graduates to begin their foundation training early. The main aim was to lessen the burden on the frontline staff. Due to the inadequate levels of personal protective equipment (PPE) available to healthcare staff, it resulted in an increased mortality rates amongst them during the early stages of the pandemic. The legislation surrounding deaths in the community was also relaxed to allow timely and efficient verification of deaths which is extremely important in the current crisis.

Our role as a call handler meant we took calls from the deceased family members, or from care homes where residents had passed away. It was emotionally challenging being the first port of call for people after they found out their loved one had passed away. It also involved liaising with GP’s and nurses and allocating them deaths to verify. Documenting death certificates and sending them to the registrars was a key part of the role. New legislations being in place regarding MCCD’s and cremation papers made it a challenging and difficult ordeal for the family, as they were already dealing with the loss of a loved one, thus making it our priority to explain the new process whilst being aware of their unstable emotional state.

Reflecting on our experience, working as a medical student during the pandemic taught us a vast amount. There was one particular encounter with a deceased patients family member which had a lasting impact on us. It was
6am in the morning and we received a handover from the team on the night rotation about the tasks pending to complete. Just like every morning, there were many MCCD’s to be written up; cremation forms needed to be filled in by the doctors and GP’s needed to be allocated deaths to go verify in the community. We logged into the phones after handover and answered a call. We were greeted by a lady, sorrowing over the death of her dad. She was extremely tearful about how her dad’s corpse had been lay in bed for over 16 hours and no doctor had been to verify the death. This meant that the funeral director couldn’t move the body to the funeral home. The daughter was sobbing, and I remember her telling me the smell of her dad’s body decomposing was extremely distressing for her. We had never in our time on placement or working here experienced a situation like this before. The way that we dealt with it was by apologizing and reassuring her that a doctor will be sent as a matter of urgency within the hour. Comforting her over the phone was extremely difficult as she was mourning the loss of her father, but it was a skill we had the opportunity to develop and it was important for us to be there for her as it is something she will remember for the rest of her life. It felt like we had failed on our end to send a doctor out on time, however the lack of staff as a result of the pandemic delayed death verification. We saw firsthand how COVID impacted the healthcare system and the death verification process, resulting in not only delayed funeral times but more traumatic experiences for the families. Despite this, we gained invaluable skills such as emotional intelligence which allowed us to understand and deal with our emotions better as well show empathy to those who needed it. This was a major learning curve for us in our medical career, knowing that we can provide better care for the next patient.

With the 6am starts, night shifts, working over 50-hour weeks and the fear of contracting the virus, it was a psychologically challenging journey. However, the benefit to people and the NHS with the potential to save lives, is a massive reward, which is exactly why we went into medicine.

I am writing this a week before my fourth-year studies begin, in hope that I won’t be needed at the death service again. We now appreciate good health and how much we took it for granted previously, COVID-19 has truly changed our perspective in the way we see the world and personally how to deal with death in the community.
