Title: To Help or Not to Help: A First Year Canadian Medical Student’s Dilemma During the COVID-19 Pandemic.

Author names: Janhavi Patel

Degrees: Bachelor of Medical Sciences (BMSc), MD Candidate

Affiliations: Michael G. DeGroote School of Medicine, McMaster University, Canada

About the author: Janhavi Patel is currently a first-year medical student at the Michael G. DeGroote School of Medicine, McMaster University, Niagara Regional Campus (St. Catherines), Canada of a three-year program. She is a recipient of Ontario Medical Students Association Innovator Grant and McMaster Medical Student Research Excellence Scholarship.

Acknowledgment: I would like you thank Victoria McKinnon, Michael Scaffidi and Isabella Fan of the Education Committee, Ontario Medical Students Association for consenting to share the infographics that we jointly created.

Financing: Not Applicable

Conflict of interest statement by authors: Not Applicable

Compliance with ethical standards: Not Applicable

Authors Contribution Statement: Conceptualization, Writing – Original Draft Preparation, & Writing – Review & Editing: JP

Manuscript word count: 799 words.

Abstract word count: 132 words.

Number of Figures and Tables: 1 Figure (3 images)

Discussion Points:

1. Is a virtual medical school even a medical school?
2. Who gets to be a front-line healthcare worker?
3. Do medical students have a role to play in the COVID-19 pandemic?
4. How to use your time “efficiently” amidst a global pandemic?

Publisher’s Disclosure: This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our readers and authors we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final citable form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.
THE EXPERIENCE.

On March 13, 2020, we received our first email concerning COVID-19. This was followed by a large flurry of emails and soon our inbox was flooded with, “there will no longer be any large group lectures”… “no clinical skills classes”… “all anatomy programs have been suspended” and so forth. The mails kept coming in, and with them came a wave of confusion about the future. For me, a first-year medical student, I was shocked. I understood that many universities across the globe were taking steps toward social distancing but an online medical school? That had to be a mistake. Suddenly, another email came in, suggesting that all the upper-year students on clerkship were discharged from clinical duties and that all medical students were expected to not visit any healthcare facilities unless necessary. After reading the last email, I was no longer feeling uncertain about the future; instead, I felt apprehensive. Although, I could not pinpoint the reason for my feelings.

Then my phone rang, it was my supervisor calling to check in. He asked what my thoughts were about medical students being suspended from clinical duties. Before I could say anything, he said that in this time when physicians should be helping out more, why should the medical students be discouraged from helping and doing their part? His idea was that we did not come to medicine to step away when the need arises, but to take proper precautions, and stand up in solidarity to provide care. Listening to him, I felt validated. I took a deep breath as I realized that the sentiment I felt was of being stripped of the opportunity to play my part. I kept thinking back to the day of our white coat ceremony just a few months ago, where we pledged to serve our communities with kindness, care, and justice. Now, a time when more than ever before, we had the opportunity to stay true to our oath, we were told that our services will no longer be required. Talking further, we both explored the other side of the issue. We did discuss how having medical students at the hospital increases liability as well as puts students at risk. However, reconciling with those ideas, and staying inside the house was difficult.

Sensing that many medical students felt the same as me yet recognizing our responsibility to engage in social distancing like all citizens, the next few days went into finding a sweet balance. Within days, we started seeing a rise in initiatives started by medical students to help with the COVID-19 relief.¹ Initiatives like helping frontline workers by doing grocery runs or providing child-care services. It was heart-warming to see how students from all across the globe were collaborating, reaching out, innovating and trying to support the frontline heroes.² Personally, I found myself drawn to reducing anxiety and aiding in the mental health of community members. As an Education Committee member of the Ontario Medical Students Association, I began working with medical students from all over Canada to create a series of infographics sharing resources and encouraging medical students to stay informed (Figure 1). I began checking in with senior residents of my building, and we tried to reassure and encourage each other. Somehow, in an attempt to physically distance, people were indeed coming together emotionally.

As days pass by, and we begin to adjust to our new online curriculum, I find myself surrounded by new dilemmas. Every news or social media outlet that I surfed was filled with ideas of being productive. From cooking challenges to exercising, and spending time with family, everyone seems to be in a race to make
efficient use of this unexpected gift of time. I am guilty of thinking similarly. I found myself being pulled in all
directions. It was important for people to recognize that not doing anything productive, and simply taking care
of ourselves was equally important. To seek support when needed. To realize that it is okay if we all do not
come out as chefs, or athletes after this lockdown.

Even though I am not at the frontline, I feel a sense of responsibility by being associated with the profession of
medicine. In some ways, living everyday through this pandemic and seeing the world cope, seems to teach me
something new every day. Even though our classes are now online, and it seems scary to think we might not
learn all the necessary clinical skills, I am determined to work harder. Most of all, stories of sacrifice and triumph
of healthcare professionals motivate me to be a better version of myself, to be a better student, and a better
physician in the future. To end off, just like all the email communications we received, I hope you are all keeping
safe during these uncertain and changing times.

Feeling overwhelmed with the never-ending stream of information on the COVID-19 pandemic? Use "T.H.I.N.K."

- Take a moment: Allow yourself the time to process information, as it's difficult even in the best of times to critically evaluate a study.
- Hierarchy of evidence: View studies lower on the hierarchy (e.g. case reports) with more scrutiny than those higher up (e.g. randomized controlled trials).
- Investigate the source: Look up the journal in which the study was published and beware of deceptive journals, such as those not found in indexed databases (e.g. Scopus, PubMed).
- n? N of what?: Always be wary of drawing conclusions from studies with small sample sizes.
- Keep Current: Be proactive in setting aside time each day to review from vetted sources.
